

Get started. Go Green.

One cartridge at a time!

Every year, millions of reusable laser toner and ink jet cartridges end up in our nation's landfills. Our suppliers collect these reusable materials and recycle them to produce premium quality replacement products.

Recycle your ink jet and laser cartridges.

With your help, we can keep these resources out of landfills and give the financial and environmental benefits back to you and your community.

THANKS FOR YOUR HELP!

Why Recycle Cartridges?

- Remanufacturing cartridges uses 80% less energy than making new ones.
- A typical cartridge takes 1,000 years to decompose.
- Each laser cartridge consists of 2.5 lbs of plastic, rubber, steel, and aluminum.
- Every year, nearly 400 million cartridges are thrown away — if placed end-to-end, they would stretch from California to Florida.
